Petition: We call on Manchester City Council to declare a Climate Emergency

We the undersigned petition the Council to declare a climate emergency, with a target to be "zero carbon" by the year 2030, with a proportionate share of Manchester Airport's emissions (35.5 percent owned by the Council) included in the carbon budget it sets.

Other councils around the United Kingdom have declared a climate emergency. While Manchester has set a target of being zero-carbon by 2038 (based on production-based emissions), this is not ambitious enough. Moreover, it excludes a fair share of the overall emissions from Manchester Airport. Declaring a climate emergency, and then taking the relevant actions, will show true leadership on the crucial issue facing young people today.
